Document 4: JP, 7-236690, A (Unitika Ltd.), 12 September, 1995 (12.09.95)

The subject matters of claims 1-17 do not appear to involve an inventive step in view of documents 1-4. Document 1 describes a titanium-dioxide complex in the form of micro particles capable of distinguishing molecules, wherein molecules capable of bonding specifically to target molecules are immobilized via a plurality of cross-linking molecules. The use of hydrophilic macromolecules such as polycarboxylic acid in immobilizing a physiologically active substance was a widespread practice prior to the filing of the present application (for example, see documents 2-4). Accordingly, a person skilled in the art could have easily conceived of the idea of using hydrophilic macromolecules such as polycarboxylic acid as cross-linking molecules in the titanium-dioxide in the form of particles complex capable of distinguishing molecules described in document 1.
